

Nidhi Chakravarthy – Data Scientist

Experience

- Nearly 4 years of experience in data science, analytics, automation, and machine learning across financial services and technology.
- Delivered client work for Nasdaq and BNY Mellon, with experience in Python, SQL, cloud workflows, dashboard QA, and data quality.
- Built and supported data solutions that improved efficiency, transparency, and operational performance.
- Currently developing capability in Claude Code and agentic AI for AI-assisted development and multi-step automation workflows.

Projects, key achievements and programs delivered

- Developing an NLP-based document processing solution using a local LLM, RAG (Retrieval-Augmented Generation), FAISS vector database, and LangChain to streamline manual document review and improve the speed of information extraction from unstructured content.
- Delivered vendor data optimisation work for Nasdaq, contributing to the index business, analysing multi-source vendor data using Python and SQL. Implemented data integration techniques and built a comprehensive data catalogue, reducing unnecessary data purchases and improving data lineage visualisation, leading to significant cost savings.
- Supported BNY Mellon treasury liquidity risk management by building a comprehensive data lineage model for the reporting function, facilitating data cataloguing and classification while enhancing transparency and traceability in financial reporting processes, technical documentation, and solution walkthroughs.
- Automated the extraction of 300+ Confluence pages through web scraping to support a visual stream map for the Index business.
- Implemented a Git-based change log for a codebase maintained by 120+ analysts, improving collaboration and auditability across delivery teams.

Other

- **Technical strengths** include data science, machine learning, exploratory data analysis, data visualisation, feature engineering, model evaluation, data pipeline design, data quality and governance, dashboarding, stakeholder communication, and technical documentation.
- **Tools and platforms include** Python, SQL, R, Excel, Power BI, Snowflake, Azure Blob Storage, Azure Synapse, Azure Data Factory, Dataiku, Solidatus, TensorFlow, Pandas/NumPy/Scikit-learn, Git, HTML, CSS, and JavaScript.
